— professional profile

I am a full stack software engineer oriented to front-end development. I have been building **Angular** web applications and coding microservices in **Node.js** or **Java** with **Spring Boot** for the past 5 years.

Besides, I am really interested in design and the user experience. Responsibility, resolution capacity and creativity are my main skills.

I love learning new technologies and applying them to my daily work. I am convinced that to work within this discipline it is essential to be up to date.

— skills

— experience
